

Transaction Management

Right time. Right place. Right tool.

Transaction Management puts inventory management in your pocket. Built for modern, mobile scanners, Transaction Management is always in reach, enabling staff to spend more time on the sales floor and less sitting at a keyboard.

Store staff can capture vital inventory details as they naturally process transactions. As soon as stores capture transactions, they are available for downstream processing via secure API integration to PDI Enterprise. This integration also allows persistent access to ERP configuration, so you can manage transactions using the latest pricebook setup.

Reduce Back-Office Dependence

Capture Activity as it Occurs

Enhance Inventory Accuracy

Stay Connected Throughout Store

Massive time savings

- Credits are 5x faster
- Adjustments are 3x faster

Complete inventory transaction management

- Cloud-based tool that deploys in seconds
- Connected via standard, secure Wi-Fi
- Automated device and app configuration
- API integration to ERP and back office
- Full-store coverage
- Easy-to-use app

A solution that complements workflows

You need a solution that works with you, supporting store workflows, not interrupting them. Whether receiving inventory or counting it, sending or receiving transfers, or recording inventory adjustment details, Transaction Management allows staff to capture essential detail at the point of the transaction to maximize accuracy and efficiency.

Implementation and maintenance are remarkably easy. Managed and maintained by PDI, Retail Site Management requires no deployed clients, upgrades, or network integrations. Scan-based deployment makes setup literally as easy as pressing a button.

Reduce IT Burden and
VPN Dependency

Automate deployment
and POS Integration
