

5G as a Service

Standardize, secure, and streamline your network

As telecom companies expand their 5G infrastructure, 5G becomes more widely available. Prudent operators will look to leverage the 5G advantage as soon as it's available.

As part of the PDI Network Security Platform, 5G as a Service provides a foundation on which to build your 5G experience. 5G stability and consistency results in reliable service and minimal downtime. 5G as a Service standardizes your network, eliminating the unknowns of last-circuit providers and variable costs. Start building your next-gen network with 5G as a Service.

Next-Gen Internet

Consistent and Reliable Service

Simplified Network Access

Streamlined Deployment

5G as a Service supports reliable internet access to **streamline business** and **position your organization** for the future

Leading-edge 5G solutions

- Eliminate unknown last-mile costs
- Consolidate service providers
- Manage vendors across widely distributed locations
- Enjoy consistent service across the network
- Minimize downtime

Streamline your business

5G as a Service is a fully managed primary Internet solution that standardizes, secures, and consolidates your network to streamline deployment and support networks of all sizes and geographic distributions.

Leave the upkeep to the PDI's Network Operations Center, backed by decades of primary internet experience and years of primary wireless experience.

Upgrade your network while reducing maintenance and training costs, and prepare your network for the new Internet with 5G as a Service.
